<Itinerary>

- 1.) *Daepo Jusangjeolli Cliff*
- 2.) *Oedolgae Rock*
- 3.) *Cheonjiyeon Waterfall*
- 4.) *Jeongbang Waterfall*

Daepo Jusangjeolli Cliff

Introduction

Jusangjeolli Cliff was formed when the lava from Hallasan Mountain erupted into the sea of Jungmun. They are rock pillars shaped like cubes or hexagons of various sizes and almost seem as if stone masons had carved them out.

Oedolgae Rock

Introduction

It is an amazing rock 10 meters in circumference and 20 meters in height and is also known as Jangguseok Rock. It is surrounded by beautiful islands such as Bum Island, Sae Island and Seonnyu (fairy) Rock.

Cheonjiyeon Waterfall

Introduction

The water at Cheonjiyeon Falls, meaning "sky connected with land," appears to fall from the heavens, giving the falls its name.

Jeongbang Waterfall

Introduction

On the cliff high above the sea stands an old evergreen tree, leaning out as if ready to fall into the ocean. Approximately 300 meters to the east is another waterfall, Sojeongbangpokpo Waterfall. It is a great place to relax during the summer. There is an observatory at the top of the cliff, from which you can command a fine view of the sea.
